ABOUT ME

I'm a full stack developer with 4+ years of professional experience and a C1 English level. Specialized in React.js and Node.js, with strong skills in TypeScript, JavaScript, and modern development practices. Currently working in a SaaS company that provides technological solutions for the automotive industry.

PROFESSIONAL EXPERIENCE

Full Stack Developer - *deConcesionarias*

Abr 2022 - Present

- Led the end-to-end development and optimization of deconcesionarias.com.ar for 3+ years, taking ownership of key technical decisions and delivering scalable features that supported thousands of active users and drove steady growth in user engagement.
- Front-end: Built responsive, user-friendly interfaces and maintained interactive UIs with React.js and MUI, improving usability and reducing UI-related support requests by 25%.
- Back-end: Designed and implemented scalable APIs and services using Node.js and TypeScript, optimizing database interactions in PostgreSQL and MongoDB to reduce API response times by 35%.
- Performance Optimization: Achieved a 50% reduction in data load time on high-traffic pages, significantly enhancing platform performance and user retention.
- Chat Integration: Developed and deployed an internal chat feature, used by +5,000 platform users, improving communication efficiency by 40% and increasing daily user interactions.
- Contributed to automated testing with Jest and applied TDD/DDD practices, increasing code coverage to 85% and reducing production bugs by 30%

SKILLS

JavaScript, TypeScript, React.js, Node.js, Git, Redux.js, PostgreSQL, MongoDB, Express.js, TypeORM, MUI, Docker, Jest, Agile Methodologies, TDD, DDD.

PROJECTS

NASA Mission Control - <http://3.144.184.152:8000/launch>

2024

- Web app to schedule space trips, select launch dates, cancel missions, and track history.
- Frontend: React.js | Backend: Node.js + MongoDB | Deployment: AWS EC2.
- Applied modern practices: RESTful APIs, responsive design, and cloud hosting.
